SPEED REDUCERS

Compact, economical and highly efficient.

We build single and multi-stage speed reducers with spiral bevel or straight spur and if necessary hardened steel gears.

Shafts normally ball bearing supported.

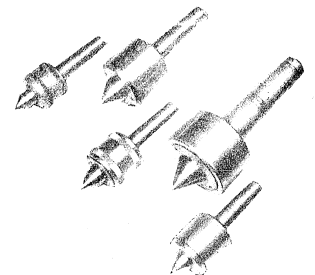

The drives can be used in both rotation senses.

Motor-speed reducers with flanged electromotors available.

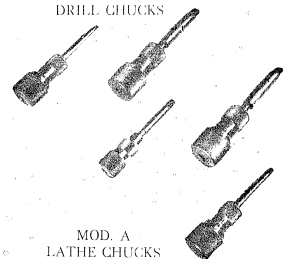

We can build enclosed gear drives for practically any ratio up to 1:2000. Ratings depend of the speeds required, but we build gear drives up to 150 HP.

Asking for detailed information, please send technical data about Your needs and purpose for which the drive is required.
